

MULTIVARIABLE CALCULUS

MATHEMATICS 1800-C

Instructor:	Subhadip Chowdhury	Email:	schowdhu@bowdoin.edu
Class Sessions:	MWF 10:40–11:35	Classroom:	Searles 215
Lab Sessions:	T 2:50–4:15	Lab:	Searles 117

Course Webpage

All regular announcements, instructor office hours, daily homework, projects, lab assignments and individual grades will be posted on Blackboard

<http://blackboard.bowdoin.edu>

Check this site on a regular basis to track your progress. General course policies, syllabus, tentative schedule and outline of the course will be also available as pdf files on Blackboard.

Office Hours

- TBA. These time slots are common for all the courses I am teaching this semester.
- There are also some course specific extra office hours in the lab time slots for some of the weeks in the semester. These are mentioned in the schedule.
- If you can't make it to any of the weekly office hours, you can email me to schedule appointments with me. These will depend on my availability.
- I am usually in the office every weekday about 10-4PM. *If my door is open*, you are welcome to knock on my door and come in with quick questions.

Prerequisites

In order to be considered for admission into Math 1800 you must either have

1. completed Bowdoin's Math 1700 or Math 1750, or
2. been given a mathematics placement of Math 1800 when you entered Bowdoin.

If you do not satisfy at least one of these two conditions you will need the permission of the Chair of the Mathematics Department in order to register for Math 1800. No prior experience with mathematical computer software is required.

Textbooks and Supplies

- *Calculus: Single and Multivariable*, 7th edition, by Hughes- Hallet, Gleason, McCallum et al.
Alternately, just the multivariable version.
- *Mathematica*, for your own computer.
Bowdoin has a license allowing students to download the program onto their personal computers. To download Mathematica from the Bowdoin network go to <https://www.bowdoin.edu/agreements/>
- *A scientific calculator*
Though Mathematica will be our most commonly used technology tool, students in Mathematics 1800-C should also have a scientific calculator.

The MCSR Distribution Requirement

Math 1800 can be used to satisfy Bowdoin's Mathematical, Computational, or Statistical Reasoning (MCSR) distribution requirement. Courses in this category enable students to use mathematics and quantitative models and techniques to understand the world around them either by learning the general tools of mathematics and statistics or by applying them in a subject area.

In Math 1800 you will learn how to apply the tools of calculus to perform fundamental computations and solve fundamental problems in two- and three-dimensions. We live in a three-dimensional world, enough of a reason to require expanding calculus techniques to functions of more than one variable. But dimensionality refers to more than physical dimensions. From this point-of-view (especially in an era of "big data") we often confront problems with literally thousands of dimensions. Math 1800 provides the first steps into how calculus is applied in these multi-dimensional situations.

Course Objectives

The emphasis of the course will be on developing an understanding of the calculus of functions of two and three variables, as well as the geometry of associated curves and surfaces in two and three dimensions.

The primary goals are for you to:

- understand functions of several variables and their **gradients**, with emphasis on **contour plots** in the plane and **graphs** in space of functions of two variables;
- master the computational techniques for, and the uses of, **double integrals** of functions of two variables;
- develop facility working with **parametric curves** in 2 and 3 dimensions;
- understand **line integrals** in the plane and master the vector calculus results associated with conservative vector fields and **Green's Theorem**.

The Components of the Course

- You will need to **read the textbook**. In particular, the designated sections of the text should be read prior to the class sessions for which they are assigned. This will get updated in the 'Prep Assignment' section of the Blackboard menu. You do not need to submit the solutions for the practice problems in the prep assignment,

but you should try to work them out yourself to solidify your understanding. We will explain the material and work out harder examples from the section in class.

- Every class will start with a short 5 min **quiz** on the previous lecture.
- **Individual assignments** will contain questions based on the textbook readings and class work. These assignments with their due dates will be regularly posted on Blackboard.
- Eight longer **collaborative projects** will be built around more challenging questions. Paper copies will be distributed and electronic copies will be available on Blackboard. Due dates for these are typically Monday next week.
- In the **computer lab** sessions you will work on Mathematica projects designed to deepen your understanding of the primary course concepts. Depending on your familiarity with Mathematica, you may find that you complete labs during the lab period, or you may find that you need some more time to complete them as homework. Either way is fine. The labs are typically worked with a partner, and you can turn in one lab per team. Lab Homework is typically due at the start of the next lecture after the lab.
- Additionally, there will be **two Midterms** given during the semester as well as a **Final Examination** at the end of the semester. The midterms will be during Friday Lab times. The final exam will be according to the Registrar's office schedule. All exams will emphasize the concepts of the course.

Advice on Collaborative Learning

The goal of **collaborative projects** is to ensure that everyone learns with and from their peers. As a member of a group you are responsible not only for your own learning but also for the learning of the other members of your group. This means that when the work is completed and submitted, every member of the group should be able to explain how to solve all the problems. Here are some ideas that past students have come up with to help your group function at its full potential.

- **Schedule enough meetings**, well in advance, and make sure to attend every one of them.
- **Be prepared.** Prior to meeting do the readings and think about the problems.
- **Contribute** to the assignment solutions. Make sure that everyone is equally involved.
- **Listen carefully** and with respect to each other. Don't interrupt and don't tune out.
- **Ask for help** when you need it.
- **Give help** when it is requested.
- **Criticize ideas, not people.** Be tolerant, respectful, and caring.
- **Never agree to something you don't understand.** Don't rush to the finish before others.

Assignment and Projects Policies

- *Often there will be no example in the text or in class work that exactly mirrors an assigned problem or project. This is by design.* To learn how to apply the principles discussed in the text and the class sessions, you cannot merely copy procedures you see laid out in examples.

- You may work on the **individual assignments** with others, but you must write your final presentation in your own words and you must complete and attach an **Assignment Cover Sheet** with every submission. This sheet can be downloaded from the coursepage. Assignments will be submitted via the Math 1800-C homework box located at TBA.
- The point of the homework is for you to work out what you do and don't understand. You should help each other to understand things and come and ask me if all of you get stuck together. When your graded homework has been handed back to you, you should go through it and see if you understand what has been written on it by the grader. If you don't, you should come to office hours and ask.
- The **collaborative projects** will be completed in your Assignment Group. All members of the group must not only participate in the analysis of the project but should discuss the specific phrasing and organization of the final submission. Final submissions must include a **Collaboration Report** (downloadable from Blackboard) on which the signatures of all participants must appear along with brief but substantive discussions of the issues confronted at your meetings. If any group member did not participate in an important aspect of the assignment, this must be stated in the Report.
- As you are solving problems in this course, remember that getting the "answer" is only one of the steps. Don't think of what you write as just showing your instructor that you have done the homework. Write as if you were explaining what you are doing to one of your classmates who missed that day of class. Think of writing as part of the process of learning. The more carefully and clearly you write your mathematics, the more likely it is to be correct, and the more likely you will be to remember it. Correct answers without explanation will not reap full credit, but clear explanations with an incorrect answer can certainly earn partial credit.
- When appropriate you are encouraged to use Mathematica to help with problem solutions.

Low scores and late submission policies

- You can **replace up to three quiz grades** by going to a mathematics or related talk, and turning in a 1–2 page summary of the talk. Talks from other departments with a math flavor to them can also count. (eg: biology, chemistry, computer science, digital and computational studies, earth and oceanographic science, economics, education, environmental studies, neuroscience and physics are all good places to look) For talk announcements, check out the posters around Searles, Druckenmiller, Kanbar, Adams, VAC and elsewhere. Also check the Bowdoin events calendar, dept. websites, the digest, e-mail announcements, and the ES newsletter.
- In general, late submission (even 15 mins late) of homework assignments will **NOT** be accepted. In extenuating circumstances, with proper prior notice, I will try to provide extensions to individuals.
- I will drop two of your lowest *individual homework* scores, no-questions-asked.

Participation

Student participation is an integral part of this class and is highly valued. Everyone is expected to make thoughtful contributions in the form of questions, statements, and reasoned arguments. You might be also occasionally invited to present something on the board. Please express yourself within the bounds of courtesy and respect. Please share your thoughts and be willing to listen attentively to perspectives that may differ from your own.

Class Attendance

You cannot be an effective and involved member of the class unless you are present! Please try to be punctual as well.

Important Dates

Midterm # 1	Tuesday, October 2, 2018
Midterm # 2	Tuesday, October 30, 2018
Final Exam	Friday, December 14, 2018, 8:30-11:30AM

Please let me know immediately of any problems with these dates. Please note that the date of the final exam is set by the Registrar's office and cannot be altered. Individual changes in final exam dates are allowed only for particularly serious situations such as three exams in a two-day period.

Grading Policy

Grades will be given for each assignment and collaborative project. In addition, each lab will include a short assignment that will be collected and graded. Both your score and how it ranks relative to the other scores in the class will determine your final grade.

The individual weights are as follows:

Individual assignments	15%
Collaborative Projects	20%
Quizzes, Labs, class work and class participation	15%
Midterm 1	15%
Midterm 2	15%
Final exam	20%

Class Policy

- Be courteous when using mobile devices. Make sure your cell phone is turned fully off, or silent. If you must make or receive a call, please go outside the classroom.
- Use of computers is permitted for note-taking but only with prior permission. Please turn off your Wi-fi and sound.
- The final exam is based on all material covered in class. If you have to miss a lecture, then I strongly recommend you study the material you missed before you return to class. I recommend doing the following steps:
 - Look at the tentative course schedule from Blackboard.
 - Read the relevant sections from the textbooks, class note, internet etc.
 - Find someone who was in class and make a copy of their notes,

Once you have done these steps, and you still need more clarification on lectures you missed, email me to schedule an appointment.

- In the spirit of Thanksgiving, there will be no homework assigned on Tuesday, November 20.
- *For any communication regarding this course, please email me from your bowdoin.edu email address. This is mainly for identity verification purposes.*

Miscellaneous Items of Interest

- Students seeking accommodations based on disabilities must provide documentation to Student Accessibility Office. Students are encouraged to discuss any special needs or accommodations with me at the beginning of the semester or as soon as you become aware of your needs. *In particular, I understand that the quizzes at the beginning of class can present a challenge, and I'm eager to discuss accommodation options with you.*

Additional information regarding the accommodations process for students with disabilities can be found at:

www.bowdoin.edu/studentaffairs/accommodations/apply-for-accommodations.shtml

- As a faculty member I am considered a Responsible Employee, per the [Student Sexual Misconduct and Gender Based Violence Policy](#). While my goal is for you to be able to share information related to your life experiences through discussion and written work, I want to be make sure you understand that as a Responsible Employee I am required to report disclosures of sexual misconduct, dating violence, stalking, and/or sexual and gender-based harassment to the University's Title IX Coordinator, Benje Douglas. My reporting to Benje does NOT mean that any actions will be taken beyond him reaching out to you and trying to schedule a time to talk to see what assistance you might need to be successful as a student here at Bowdoin. For more information please check out:

www.bowdoin.edu/title-ix

The Honor Code

I support and adhere to the principles of [The Bowdoin College Academic Honor Code](#). In particular, I will assume all members of the class are trustworthy in their dealings with me as well as their fellow classmates. However, should a violation of this trust be discovered, it will be reported to the Judiciary Board. The goal is not vengeance against those who violate the Code but fairness for those who adhere to it. If you have any questions about the appropriateness of a particular situation, please communicate with me.
